Land-use planning approval
Project Management

Pillar Consulting provided project management services for this public works project, largely funded by the American Recovery and Reinvestment Act of 2009.

This 1,400 square foot alteration and addition increases the floor area of Asher Clinic to 4,539 SF and provides additional treatment, trauma, and administrative facilities.

Pillar Consulting Group also served as the prime professional on the project, responsible for the design of the facility, providing complete design service with assistance from Broadleaf Architecture for interior design and MFIA for mechanical and electrical engineering services.
