

Full or Partial Collapse Structural Evaluation

Oregon

Building codes set the requirements for repairs based on the amount of damage as well as the cause of damage. Our office is capable of the investigation and analysis required to determine the cause of damage, the extent of damage and to determine building code requirements for the repair or replacement of damaged members.

In this project, multiple buildings were damaged by heavy snow loads. Our office worked with the building owners as well as the insurers to determine the extent of damage, building code requirements for repair, repair solutions and the cost of repairs.

STRUCTURAL FORENSICS
