

# Concrete Investigation

Oregon

Pillar Consulting Group has investigated concrete failures within both the commercial and industrial environment. We have the tools and knowledge to do a thorough investigation to determine root causes of failures.

Our services include surveys to determine the extent of concrete damage, testing to determine factors leading to damage such as chloride or sulfate content, analysis to determine the likelihood of continued damage or deterioration, and design of repair solutions.

Reports and drawings are thorough and concise to lead stakeholders to an understanding of the problem as well as the solution.

- Corrosion
- ASR
- Carbonation
- Chloride Content
- Sulfate Attack
- Physical Damage
- Spalling
- Delamination
- Sounding
- Petrographic Examination

## STRUCTURAL FORENSICS
