

Benton Arena Upgrade

Corvallis, OR

BEFORE PICTURE

Square Footage:
31,300 SF

Design Team:
Broadleaf Architecture Architect
Bineham Construction General Contractor

Pillar's Responsibilities:
Structural Engineering

AFTER PICTURE

The Benton County Fair Board wanted to upgrade the look and functionality of the arena located on the Benton County Fairgrounds campus. Phase I upgrades include a new roof, new exterior siding, as well as new door and window locations.

Providing new large openings triggered a seismic upgrade to portions of the building as well as new lateral systems to support wind and seismic loads. These were achieved where required by strengthening existing lateral systems and introducing holdings and footings where required.
